ENGINEERING
RE: BARBLOCK™

BarbLock™ Retainers are the only system that locks and seals flexible tubing onto barbed fittings. By providing a 360° radial crimp & seal at the tube-fitting interface, BarbLock Retainers eliminate channel leaks and pull-off problems inherent in other systems. BarbLock Retainers use no adhesives or solvents and are ideal for systems transferring liquids or gasses. BarbLock Retainers meet USP Class VI material requirements and are available in an array of standard sizes. BarbLock Systems is suitable for use on capital equipment and on single-use items. BarbLock Retainer's superior sealing technology makes cable ties, adhesives, and solvent bonding obsolete.

Used for

- Transferring Liquids & Gasses
- Capital Equipment
- Single Use Devices
- Panel Mount Connections
- Device Assemblies

Available in an array of standard sizes.
